

Asset Inspection

Improving asset inspection to save time and resources and deliver higher quality information

The manual inspection of assets is a time consuming and complex process with many different factors to consider.

Automation of the inspection process, eliminating paper and enabling more effective communications makes a major difference to the productivity and efficiency of every inspection team. As well as the quality of information that becomes available to the business.

Asset Inspection

Originally created to help address the inspection requirements for the reservoir team at a water utility, this app is designed to help automate the inspection process and the creation of subsequent reports for the business.

It simplifies the process to save time, effort and cost from the process.

For Inspectors

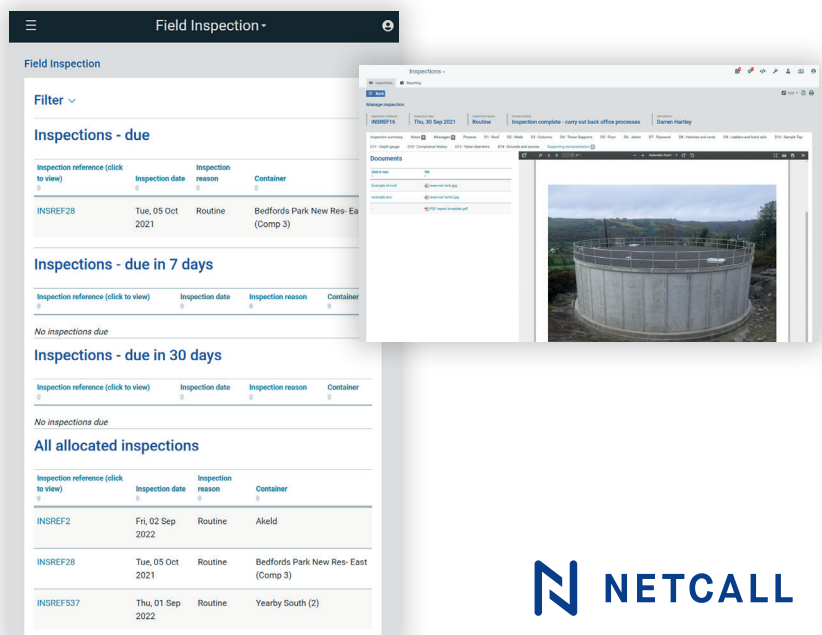

Designed to work offline in the field as a mobile app running on tablet devices, Asset Inspection makes it easy for Inspectors to complete their inspections and create their reports. It's easy-to-use interface speeds-up the time it takes to record inspection information and Inspectors can refer to previous reports for the same asset. Longer form text can be entered when back in the office using a desktop computer.

For the Back Office Team

The app allows the team to create and allocate inspections, review completed inspections and process them according to the organisation's needs. Communications and reminders are auto-generated to speed-up the flow of information through the process.
