

Health & Safety LaunchPad

Apps to help address the health and safety requirements of your organisation

You know the importance of digitising health and safety systems. It allows better visibility of what's happening. Plus, it makes it easier to measure performance, generate real-time alerts, notifications and to ensure better reporting and early identification of issues and trends.

You've probably invested in one or more health and safety software systems. Even though these systems are relatively mature, they won't have been designed around the specific needs of your organisation and the way it conducts its business.

Instead of fitting your work practices around these systems, it's better to have the systems work around the way you work, supporting the health and safety programmes you're implementing.

Constantly evolving health and safety requirements

These health and safety challenges must be tackled right now:

- Increase use of contractors
- Rapidly ageing workforce
- Maintain and upgrade essential assets and infrastructure
- Manage rapid developments in technology
- Ensure a safe return to the office

The existing systems you have may address some of these needs. However, it's likely that there will be functional and process gaps.

As you embark on new large infrastructure projects, you need to ensure that there's no increase in injuries or ill health. And you need to ensure support and compliance with regulatory frameworks which are designed to ensure the safe delivery of major programmes of work.

Imagine having your own way of building software systems and digitising processes that are built around the specific needs of your organisation.

Health & Safety LaunchPad apps

Liberty Create is our low-code platform. It lets you easily and rapidly develop your own software applications to automate health and safety systems in a cost-effective way.

The Health & Safety LaunchPad provides a set of starter applications to get you up and running very quickly. These can be tailored to exactly fit the way your organisation works. You can extend and customise them as you choose.

Best of all, as requirements evolve and change, you can manage and control the changes. Systems are easily updated to fit your way of working in a timeframe that works for you.

In addition to the applications, Health & Safety LaunchPad also includes training on the Create platform and mentoring. This helps your team to maximise the potential of these applications for the organisation.

Immediate value from a range of useful apps

Health & Safety LaunchPad includes a range of useful accelerators that can be tailored to meet your exact needs. These include:

- **Employee welfare risk assessments**
- **Vaccination management**
- **Contact tracing and outbreak management**
- **Coordination of PPE and other protective equipment**
- **Daily health checker**
- **'Who's on?'**
- **Emergency alerting**
- **Surveys**
- **Report it/mobile reporting**
- **Ideation**
- **Booking systems**
- **Return to the office - planning, checklists and resource booking**

And you can easily build your own applications. Plus, browse our Community and AppShare for other ideas and applications to download and use.

Health & Safety LaunchPad is an extensible platform designed to help you meet current and future requirements. Apps can be built by your own business people working alongside IT, or by a range of partners that are ready to help improve the health and safety experience for your organisation.

Integrate with your existing systems

Health & Safety LaunchPad includes an integration adapter. This connects to, and takes advantage of, your existing systems to benefit from the technology investments that you've already made.

Built on Liberty Create

Health & Safety LaunchPad is powered by Liberty Create, Netcall's powerful low-code application development platform. It is designed for both business users and developers, allowing them to collaborate to build better digital experiences.

Create is a complete toolkit to cover the entire app lifecycle:

- ✓ Design the process
- ✓ Create the app
- ✓ Link to your other systems
- ✓ Test it
- ✓ Sign it off and deploy it
- ✓ Track performance and tweak as things change

Part of the Liberty Platform

Within the Liberty Platform, Create works alongside Liberty RPA, our AI-powered robotic process automation, Liberty Converse, our complete contact centre, and Liberty Connect, our AI-assisted conversational messaging solution.

Together, these solutions deliver class-leading CX for a wide range of other industries.
